This document is part of an integrated
file. If separated from the file it must be
subjected to individual systematic review.

NO CHANGE

The manufacturer has modified the subminiature capacitor which was the cause of faulty operation in two of the first five CV-2A units. The R&D Laboratory has received ten modified capacitors. The capacitors will be tested for use in the ten additional CV-2A units required as soon as the workload permits.

Fabrication of an additional ten CV-2A Converters.

Design and construction of a prototype unit capable of covering the 3-30 mc range. This unit has been tentatively designated the CV-5.
